

SERVICE BULLETIN – 01/JANUARY 2009

SPR SERIES and SPN 125-255

CHANGES ON GEAR REDUCER TOP CASE

Starting from the following Serial Numbers:

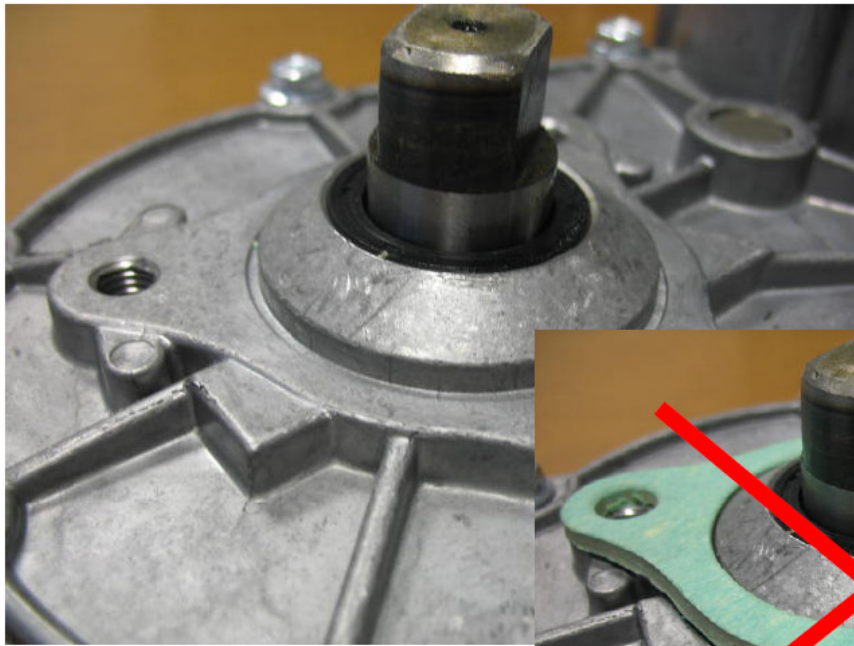

SPR 80	s/n 5216	SP 125	s/n 2328
SPR 120	s/n 526	SP 255	s/n 2771
SPR 165	s/n 2437		

The top gear box case has been modified on their three evaporator/freezer support bases, as detailed on the here below photo, in order to assure a perfect perpendicularity between the gear reducer top surface and the vertical evaporator.

Due to the changes made on the gear reducer top case, the old gasket **P/N 640060 00** is no longer used and has been replaced by an O Ring (**P/N 640041 38**) located between the upper surface of the gear box and the water drip plastic tray.

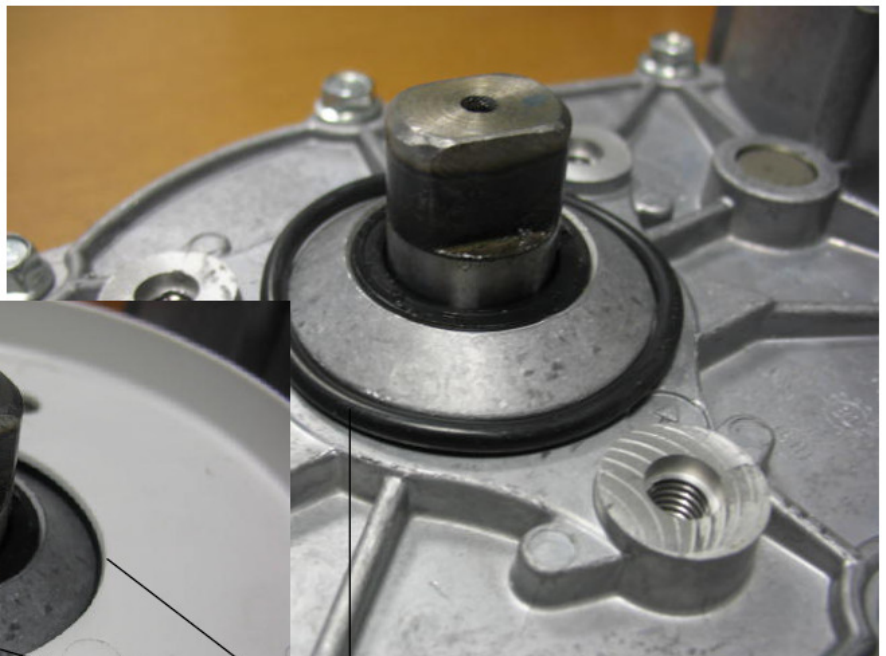

The new gear reducer, available under the same Part Nbr of the former one, will be supplied completed with the O Ring as well as instruction sheet (attached) once we'll run out of stock of the old version.
