

SERVICE BULLETIN – 01/NOVEMBER 2007

SPR SERIES and SP 125-255

NEW COUPLING SPRING

Starting from the following Serial Numbers:

SPR 80	s/n 4828	SP 255	s/n 2566
SPR 120	s/n 378	SP 125	s/n 2196
SPR 165	s/n 2337		

As recently done on SP 405-605 and SPN 1205 Models, even on SPR Series and small SP Models the previous spring of 2 mm chord section used on Coupling Kit Part Number **060359 01**, **see photo below**, has been replaced with a little bit larger one of **2,5 mm** chord section, in order to have a higher vertical load pushing down the upper part of the coupling and avoid any possible undesired rising up, during the normal operation of the gear reducer.

The new Coupling Kit is exchangeable with former one and will be supplied from now on, in place of the former one under the same Part Number.
